

# ANDRÉS SANHUEZA

---

## PROFILE

I'm a FrontEnd Developer with a Designer background. I majored in design, taught myself how to code in Javascript, and I've been working as a FrontEnd developer for the past 6 years. I have experience working in teams with other developers and designers, and also working as a solo frontend developer for web apps.

I moved to Chile to Norway in 2022 together with my wife who is a EU citizen studying at NTNU. I have a Norwegian residence card and ID, I'm legally allowed to work in Norway, and I'm able to move to a new city if necessary.

## EMPLOYMENT HISTORY

### Chectrack

#### Lead FrontEnd Developer (February 2021 - November 2023)

*Santiago, Chile (Remote)*

Developed and maintained the Chectrack web app, a communication solution that integrates chat platforms like WhatsApp and Instagram, with sales and checkout data from Shopify and live data from QR codes in situ. Built with ReactJS, Redux, and Material UI. It uses RESTful APIs and WebSockets to communicate with the backend.

Increased user engagement and reduced customer support burden by changing the focus to user self-service. This was achieved by working closely with the product team to gather user feedback and keeping track of user behavior. The result was a redesign of several features, and the beginning of an ongoing process of improving the user experience by reviewing the real usage of features after they are released.

Worked closely with the design and sales team on feature design, giving both my perspective as a developer as well as a designer.

Worked with the QA to improve the testing process, implementing Sentry for error tracking and automated testing with Cypress.

Worked with mobile developers on the mobile app currently deployed on the App Store and Google Play. The mobile app is built with React Native and Firebase.

### Conectter

#### FrontEnd Developer (October 2017 - February 2021)

*Santiago, Chile (Hybrid remote / on-site)*

Development and web design for the Conectter web app, a project and task management solution. Built with AngularJS, Pug/Jade for HTML templating, and SASS for CSS preprocessing. Uses RESTful APIs to communicate with the backend.

Worked under the SCRUM agile methodology for task management and feature development.

Worked closely with the backend team to develop new features and improve existing ones. Had a hand in the backend for some features using PHP and MySQL.

Participated on UX/UI field researching, conducted user testing, and user interviews. Later on, applied the findings to a redesign of the web app.

## **EDUCATION**

**Designer**

**Pontificia universidad católica de Chile (2011 - 2015)**

*Santiago, Chile*

## **SKILLS**

Javascript, HTML, CSS3, SASS, React, Redux, AngularJS, Material-UI, Typescript, Cypress, Tailwind
